

Discovery

code search, size-banded
frame of repositories

Reconstruction

fetch by git blob id,
verify by hash

Corpus

parse frontmatter,
join governance files

Oracles

execute the runtime:
resolve, admit, drop

Annotation

codebooks, two model
raters, reliability sample

Curation

screen fixed before outcomes
-> ALL / E1 / E2 / E3

Analysis

repository-level
bootstrap, paired tests

Experiment

5 configs x 6 tasks x 3 models;
report-only extension

shaded stages execute the coding tool itself; the rest read the artifact
